Stephen & Ramona Crane
Flush Mount Solar PV Installation

Plans Examiner,

This letter is regarding the installation of Roof Mounted Solar PV on the existing residential structure at the address above.

All panels/arrays have been situated to the rear of the house to minimize visibility from the street. The panels and the rail will be all black in order to blend in with the roof as much as possible. Panels will be flush mounted to the roof as to not be high profile - They will not be raised more than 4 inches above the shingles.

System will be a 5.7kW system with 15 panels. Design plans (submitted with application email) have Site Layout and all other pertinent information listed.

Kaitlyn Kearns | Project Manager | Pueblo
