

Inventory of Ute Traditional-Use Plants

THIS STUDY IS focused on the identification of culturally important plants within the BPMD and how they are used by Ute people. The study is informed in part by more than a century of Ute cultural and natural resource studies as well as through interviews with Ute tribal participants. The protocols for collecting ethnographic information have evolved over the past century from a beginning in salvage ethnography that was often exploitative and had little community review or informed consent, to a community-based participatory approach. In our work, we draw upon previously published materials to provide baseline data that our contemporary tribal colleagues could review, correct, and update. The Southern Ute Tribe requested a full review of previously conducted research pertaining to Ute traditional use plants to create a baseline for the tribe's future consultation and educational efforts.

Specifically, this study relies on several key research projects that included ethnobotanical information. For the Ute Indian Tribe, the *Ethnography of the Northern Utes* (Smith 1974), the summary report of the Ute Ethnobotany Project (Chapoose and others 2012; McBeth and others 2008), and the article "Some Plant Names of the Ute Indians" (Chamberlin 1909) provided the majority of information about Ute plants and names. Three projects that included information about all three Ute tribes were also used, including an ethnographic overview of Chimney Rock National Monument (Hopkins and others 2020), a traditional use study at Great Sand Dunes National Park and Preserve (Kelley and others 2019), and an ethnographic and ethnobotanical survey of the United States Air Force Academy (Kelley and others 2017). The chapter on the Utes written for the *Handbook of North American Indians* (Callaway and others 1986), and an ethnographic overview of the Utes of west-central Colorado (Burns 2003) also provided significant ethnobotanical

information. Information was also gathered during research at the Ute Indian Museum in Montrose, Colorado, during the current project.

Research specific to the Southern Ute Tribe included a National Park Study on the Old Spanish Trail (Stoffle and others 2008), as well as consultation records and interpretative material generated for the Great Sand Dunes National Park and Preserve (Naranjo 1997; Ruppert 1996). Research specific to the Ute Mountain Ute Tribe includes the recently completed *Ute Mountain Ute Traditional Cultural Property Survey of the Navajo-Gallup Water Supply Project* (Living Heritage Anthropology and others 2019). Several reports discuss how Ute cultural perceptions of the landscape differ from non-Native viewpoints, and how Ute people are uniquely qualified to identify, interpret, and evaluate landscapes and resources that are culturally significant to them (Burns 2003; Callaway and others 1986; Hopkins and others 2020; and McBeth 2019).

Ute orthography has evolved over the last century. In this report, we use the orthography used during the original research when the information was collected. The standardization of Ute orthography was beyond our scope of work. Kroeber (1908), Chamberlin (1909:27–32), and Sapir (1930a, 1930b, and 1931) made early attempts to transcribe the Ute language. James Goss (1967 and 2000) began his study of the Ute language in 1961 and has contributed greatly to Ute orthography over the last half century. Ute terms documented during fieldwork for the present study were provided by and reviewed by tribal research participants for accuracy. Differences in dialect and spelling remain among families and within the three Ute tribes. Presently, the Southern Ute Tribe uses an orthography developed by Thomas Givón (2011, 2013a, and 2013b) as the official orthography of the tribe. Dr. Stacey Oberly, a linguist with

the Southern Ute Culture Preservation Department also provided updated translations and Ute terms. When the tribal origin of a Ute term is known, the Ute term is accompanied by a superscript with the following abbreviations: Southern Ute Indian Tribe=^(S), Ute Indian Tribe=^(N), Ute Mountain Ute Tribe=^(M). Ute terms from two bands of the Ute Indian Tribe are abbreviated here as White River Band=^(W) and Uncompahgre Band=^(U).

This chapter discusses Ute traditional-use plants found within the study area. In addition to the information obtained through the literature review, Ute perspectives were documented during fieldwork in the study area designed to elicit Ute information about the cultural significance of plants, including seasonality of use, harvesting practices, and traditional management. A total of 202 plant species were identified through archival research. Forty of these plants were observed during fieldwork (Table 5.1). More traditional-use species are present in the study area but were not observed partly because of seasonal and site-specific

conditions. Of the total plant species; 83 have edible plant parts; 52 have medicinal uses; 16 are used in basketry; 5 are used for fuel (firewood); 19 have ceremonial uses; 17 have utilitarian uses; 7 are used for shelter; 2 are poisonous and avoided; 2 are used for animal feed; 1 as an insect repellent; 2 as a trail marker; 4 are used for hygienic purposes; 7 for weaponry; 1 as a toy; and 46 have unspecified uses. The study team recognizes, however, that these categories capture only one dimension of the cultural significance of these plants. Utes view these plants as indicators of their aboriginal territory, active players in certain oral histories, and as a means of sustaining the life and health of Ute people. This list should also be viewed as incomplete, as Ute protocols for sharing cultural information have previously and continue to influence what information can be shared and documented. Even if a specific plant is not noted here, its very presence in the landscape makes it a part of the Ute cultural and aboriginal landscape and therefore is significant to Ute people.

Table 5.1. Ute Traditional-Use Plants Identified in Archival Research and Field Visits

Latin Name	Common Name	Ute Name(s)	Traditional Use(s)	Plant Part(s) Used	Elevation Range
<i>Abronia fragrans</i>	Snowball sand verbena	sa-gwam-six-ta-gwiv ^(N)	Medicinal	Root; Flower	400–2000 m (1300–6560 ft)
<i>Achillea millefolium</i> *	Yarrow	i-am'-si-ta-gwiv ^(N) ; quishee quish ^(S)	Medicinal	Leaf	0–3600 m (0–11800 ft)
<i>Achnatherum hymenoides</i>	Indian ricegrass	nuumuvopeeav ^(M)	Edible	Seed	1066–2286 m (3500–7500 ft)
<i>Agastache pallidiflora</i>	Bill Williams Mountain giant hyssop	—	Edible	Leaf	2133–3050 m (7000–10000 ft)
<i>Agave parryi</i>	Parry's agave	—	Edible	—	1524–2133m (5000–7000 ft)
<i>Agoseris</i> spp.	Agoseris; Chicory	añ-'ka-pi-sa-wats ^(N)	Edible	Leaf	1981–3050 m (6500–10000 ft)
<i>Agropyron cristatum</i> *	Crested wheatgrass	—	Edible	—	1524–2743m (5000–9000 ft)
<i>Agrostis scabra</i> *	Rough bentgrass	—	Basketry	—	1524–2895 m (5000–9500 ft)
<i>Allium</i> spp.*	Garlic	kwee cha see hooh ^(N) ; kwicha-sugu'a ^(S) ; patasi ^(S)	Edible	Bulb; Leaf	0–3500 m (0–11500 ft)
<i>Allium</i> spp.	Wild onion	wisi-sik ^(W) u ^(M) ; soovweya ^(N) ; seevergravp ^(N) ; cebolla ^(N) ; badasi ^(N) ; kwicha-sugu'a ^(S) ; patasi ^(S) ; saqo-patasi ^(S) ; sigu'a ^(S)	Edible	Bulb; Leaf	0–3500 m (0–11500 ft)
<i>Allium acuminatum</i>	Taper tip onion	kũñ-ka ^(N)	Edible	Bulb; Leaf	91–1493 m (300–4900 ft)

Table 5.1. (continued)

Latin Name	Common Name	Ute Name(s)	Traditional Use(s)	Plant Part(s) Used	Elevation Range
<i>Allium bisceptrum</i>	Twin crest onion	kũñ-ka ^(N)	Edible	Bulb; Leaf	1100–2987 m (3600–9800 ft)
<i>Allium cernuum</i>	Wild onion; Nodding onion	—	Edible	Bulb; Leaf	600–3500 m (1950–11500 ft)
<i>Allium geyeri</i>	Geyer's onion	soovweya ^(N)	Edible	Bulb; Leaf	1524–3050 m (5000–10000 ft)
<i>Allium schoenoprasum</i>	Wild chives	kwechusagoot ^(N) ; phutus ^(N)	Edible	Leaf	0–3500 m (0–11500 ft)
<i>Amaranthus powellii</i>	Green amaranth	—	Edible	Leaf; Seed	0–2500 m (0–8202 ft)
<i>Amaranthus retroflexus</i>	Red root amaranth	—	Edible	Leaf; Seed	0–2500 m (0–8202 ft)
<i>Amelanchier alnifolia</i>	Serviceberry; Juneberry	jewap ^(S) ; joowump ^(S) ; to-ũmp' ^(N) ; toowump ^(S) ; tuwə=pi ^(W)	Edible	Fruit	1371–2743 m (4500–9000 ft)
<i>Amsinckia tessellate</i>	Bristly fiddleneck	tu'-ka-rũmp ^(N)	Unspecified	—	0–1524 m (0–5000 ft)
<i>Antennaria dimorpha</i>	Low pussytoes	tim'-pĩn-tsau-ũv ^(N)	Unspecified	—	600–3400 m (1950–11150 ft)
<i>Apocynum cannabinum</i> *	Indian hemp	—	Utilitarian	—	1524–3050 m (5000–10000 ft)
<i>Arabis holboellii</i>	Holboell's rockcress	qta'-ko-mav ^(N)	Unspecified	—	1828–275 m (6000–9000 ft)
<i>Arctostaphylos uva-ursi</i> *	Bearberry; Kinnikinnick; Wild tobacco	tahmahup ^(N)	Ceremonial; Medicinal	Leaf	0–3100 m (0–10170 ft)
<i>Arnica mollis</i> *	Soft arnica	—	Medicinal	Root	1000–4000 m (3280–131253 ft)
<i>Artemisia</i> spp.	Sage	sahwa-vũ ^(S) ; saghwa-pũ ^(S) ; sahwovf ^(N) ; sahwavf ^(N)	Medicinal	Leaf; Stem; Flower; Seed	760–3000 m (2490–9840 ft)
<i>Artemisia frigida</i> *	Fringed sage	—	Medicinal	Leaf; Stem	500–3000 m (1640–9842 ft)
<i>Artemisia ludoviciana</i>	Western mugwort	—	Medicinal	Leaf; Stem	760–2590 m (2500–8500 ft)
<i>Artemisia tridentata</i>	Big sagebrush	ma-av ^(N) ; ma-ap ^(N) ; sahwovf ^(N) ; meap ^(N)	Medicinal	Leaf; Stem	1524–2438 m (5000–8000 ft)
<i>Asclepias</i> spp.*	Milkweed	sa-na'-ko-mav ^(N) ; teeyahnuhkov ^(N)	Medicinal	—	—
<i>Ascomycota</i> (Phylum)	Lichen	—	Medicinal	—	—
<i>Asparagus officinalis</i>	Asparagus	-	Edible	Shoot	0–2500 m (0–8202 ft)
<i>Astragalus iodanthus</i>	Humboldt River milkvetch; Buffalo bean	ti'-wĩ-pĩtcũm-av ^(N)	Unspecified	—	—
<i>Atriplex canescens</i>	Four-wing salt brush	—	Unspecified	—	100–1981 m (300–6500 ft)

Table 5.1. (continued)

Latin Name	Common Name	Ute Name(s)	Traditional Use(s)	Plant Part(s) Used	Elevation Range
<i>Balsamorhiza sagittata</i>	Arrow leaf balsamroot	—	Edible	—	1000–3000 m (300–9842 ft)
<i>Beckmannia syzigachne</i>	American slough grass	a-wat'-o-gwiv ^(N)	Unspecified	—	1200–2700 m (4000–9000 ft)
<i>Berberis repens</i>	Oregon grape; Barberry	ksip-o-a-ats ^(N)	Medicinal; Edible	Root; Fruit	1524–2591 m (5000–8500 ft)
<i>Betula occidentalis</i>	Birch	?pa-gwai'ûv ^(N)	Unspecified	—	1676–2438 m (5500–8000 ft)
Bryophyta (Division)	Moss	pasagho-vu ^(S)	Hygiene	Whole plant	—
<i>Calochortus gunnisonii</i>	Mariposa lily	—	Edible	Bulb	900–2700 m (3000–9000 ft)
<i>Calochortus nuttallii</i>	Sego lily	si'go ^(N) ; sik'u ^(N) ; cikwu ^(W) ; see wus ago ^(N)	Edible	Bulb; Seed; Flower	1372–2438 m (4500–8000 ft)
<i>Carex</i> spp.	Sedge	pi'-gwûts ^(N) ; pa'-gwûts ^(N)	Unspecified	Bulb	—
<i>Castilleja</i> spp.	Paintbrush	'aka-sée'a-pu ^(S) ; pia-sée'mi-'napu ^(S) ; uka-si-ti ^(W) ; ?uka-si-ti ^(U) ; chagon-nuhu-nup ^(N)	Utilitarian	—	—
<i>Castilleja occidentalis</i> *	Western yellow paintbrush	—	Edible	Flower	—
<i>Castilleja integra</i>	Whole leaf paintbrush	—	Edible	Flower	1372–3200 m (4500–10500 ft)
<i>Castilleja parviflora</i>	Mountain paintbrush	mo'-ten-aît ^(N)	Medicinal	—	—
<i>Castilleja rhexifolia</i> *	Splitleaf Indian paintbrush	—	Edible	Flower	—
<i>Celtis reticulata</i> *	Netleaf hackberry	—	Weaponry	Wood	305–2286 m (1000–7500 ft)
<i>Cercocarpus montanus</i>	Mountain mahogany	tu-have ^(M)	Edible; Medicinal; Weaponry	Stem	1300–2200 m (4500–7000 ft)
<i>Chenopodium</i> spp.	Lamb's quarters	—	Edible	Leaf; Stem	—
<i>Cirsium</i> spp.	Thistle	—	Edible	Shoot	—
<i>Cladonia</i> spp.	Reindeer lichen	—	Unspecified	—	—
<i>Claytonia megarhiza</i>	Spring beauty	noogkachoon ^(N) ; noowhchoon ^(N) ; nooglacachoon ^(N)	Edible	Bulb	—
<i>Cleome serrulata</i>	Rocky Mountain bee plant	—	Edible; Medicinal	Leaf; Seed	914–2896 m (3000–9500 ft)
<i>Collinsia parviflora</i>	Blue-eyed Mary	mi'-pûn-ga-shi''-êts ^(N)	Medicinal	—	900–2700 m (3000–9000 ft)
<i>Comandra umbellata</i>	Pale bastard toadflax	sa-gwa-si-ûn-gûts ^(N)	Medicinal	Root	152–2591 m (500–8,500 ft)
<i>Cornus sericea</i>	Redosier dogwood; Kinnikinnick; Red willow	a-va-tu-tûm-bûtc-ûm-av ^(N) ; kaib'-o-gwiv ^(N) ; kai'-siv ^(N)	Basketry	Stem	1372–3048 m (4500–10000 ft)

<i>Pinus aristata</i>	Bristle-cone pine	—	Beverage	Needle	1700–3400 m (5577–11154 ft)
<i>Pinus contorta</i>	Lodgepole pine	ah-gwoop ^(N)	Shelter	Wood	—
<i>Pinus edulis</i>	Piñon pine	wa'a-pu ^(S) ; tu-gwoop ^(M) ; noodtoohuhch ^(N) ; noodtoohvuhch ^(N) ; na?a-tipa=ci ^(W) ; nutu-tipa=ci ^(W)	Edible; Utilitarian; Basketry; Fuel	Wood; Seed; Sap; Needle	1500–2700 m (4921–8858 ft)
<i>Pinus flexilis</i>	Limber pine	ah-gwoop ^(N)	Shelter	Wood	1000–3000 m (3280–9842 ft)
<i>Pinus ponderosa</i> *	Ponderosa pine	'agho-pu ^(S) ; uu-vweep ^(N)	Ceremonial; Edible; Medicinal; Utilitarian	Wood; Sap; Needle	1524–2743 m (5000–9000 ft)
<i>Poliomintha incana</i>	Purple sage; smoke sage; frosted mint	'aqho-tama-na-pu ^(S) ; quata manah ^(M)	Medicinal	Whole plant	—
<i>Polypogon monspeliensis</i>	Annual rabbit's foot grass	shpump ^(N)	Unspecified	—	152–2438 m (500–5000 ft)
<i>Populus</i> spp.	Cottonwood	suvu-pu ^(S) ; páa-suvu-pu ^(S) ; sho-av ^(N)	Ceremonial; Fuel; Utilitarian; Edible	Wood; Seed; Bark	1524–2286 m (5000–75000 ft)
<i>Populus angustifolia</i> *	Narrowleaf cottonwood	—	Unspecified	—	1500–2200m (5000–7000 ft)
<i>Populus fremontii</i>	Fremont's cottonwood	—	Unspecified	—	700–1900m (2500–6100 ft)
<i>Populus tremuloides</i> *	Aspen	suvu-pu ^(S)	Edible; Medicinal; Shelter; Fuel; Ceremonial	Wood; Sap	0–3048 m (0–10000 ft)
<i>Potentilla anserina</i>	Silverweed cinquefoil	qte'-äñ-g'iv ^(N)	Unspecified	—	1100–2700 m (3500–9000 ft)
<i>Potentilla concinna</i> *	Elegant cinquefoil	—	Unspecified	—	—
<i>Potentilla rubra</i> caulis*	Rocky Mountain cinquefoil	—	Unspecified	—	—
<i>Prunus virginiana</i> *	Chokecherry	tée'na-pi ^(S) ; durn-up ^(S) ; turnup ^(N) ; titatinga=pi ^(W)	Edible; Weaponry	Fruit; Stem	(1372–2438 m (4500–8000 ft)
<i>Pseudo-cymopterus montanus</i> *	Alpine false spring parsley	—	Edible	Root	1676–3658 m (5500–12000 ft)
<i>Pseudotsuga menziesii</i> *	Douglas fir	sa'ma-'agho-pu ^(S) ; sa'ma-yuvu-pu ^(S)	Shelter	Wood	1524–3048 m (5000–10000 ft)
<i>Pteridium aquilinum</i>	Western bracken fern	kai-ban-kim-bis ^(N)	Edible	Leaf; Shoot	1067–2896 m (3500–9500 ft)

*Denotes plants species was observed during fieldwork. Elevation ranges derived from SEINet 2021; Springer and others 2009.

ETHNOGRAPHIC SUMMARIES OF PLANT RESOURCES IN THE BPMD AREA

Plants are important in Ute subsistence and ceremony, spirituality, and education. Traditional-use plants are considered sacred because they provide a link to traditional Ute values, knowledge, and history (Perlman 1998:69). Traditional-use plants serve a range of functions including food, medicine, ceremonies, household maintenance, hygiene, construction, shelter, entertainment, and education. Traditional knowledge about plants has been preserved primarily through the continued interaction with the environment and maintenance of traditional cultural practices. The following section describes ethnographic information for plants identified during this study. For some plants, the available ethnographic information is limited to a Ute name; however, even this is significant because names represent a legacy of use, knowledge, and understanding.

The ethnographic information presented in this chapter was obtained or reviewed during interviews and fieldwork with Ute tribal research participants (Figure 5.1; Figure 5.2; Figure 5.3). A plant biologist, William Widener, assisted with fieldwork to ensure accurate identification of plant species. Plants are listed in alphabetical order according to their scientific name and are summarized in Table 5.1. Scientific

terminology rather than Ute names were used to order the discussion so that the EPA can more easily use these data for continued remedial investigation of the BPMD. Common names and Ute names are also provided.
