

MEMORANDUM

To: Todd Frisbie, P.E., PTOE
City of Colorado Springs, City Traffic Engineer

From: Curtis D. Rowe, P.E., PTOE
Vice President

Date: August 18, 2021

Reference: 2424 Garden of the Gods Traffic Study Review

At the request of the City of Colorado Springs, Kimley-Horn has provided an independent third-party review of the traffic impact study prepared for the 2424 Garden of the Gods project to be located along the northwest side of 30th Street between Garden of the Gods Road and Flying W Ranch Road. The traffic impact study prepared for this project was prepared by SM Rocha, LLC, dated March 2021. It is understood that the project may develop to include either 420 multifamily residential units or 200 residential units and approximately 200,000 square feet of general office space within the 2424 Garden of the Gods Office Park. The traffic study review and methodology are outlined in the following memorandum per request of the City of Colorado Springs staff.

TRAFFIC STUDY REVIEW

Based on our review of the 2424 Garden of the Gods Traffic Impact Study prepared by SM Rocha, March 2021, Kimley-Horn and Associates concurs with the methodology and findings outlined in the project development traffic study. It is our opinion that the development traffic study adequately adjusted traffic volume counts conducted in 2020 to represent pre-pandemic normal traffic conditions. In fact, a comparison of traffic projections (see **Figure 1**) between the SM Rocha study and Kimley-Horn consistently show the SM Rocha traffic projections to be higher. Both the SM Rocha and Kimley-Horn traffic projections used the same assumptions of the existing office park development, the addition of Flying W Ranch, the addition of Red Leg Brewery, and a two percent annual growth rate. Therefore, the traffic projections developed and conclusions stated in the development traffic study are believed to be valid.

DATA COLLECTION AND COMPARISON

Additional weekly data was collected at the 30th Street and Garden of the Gods Road intersection to determine when the peak day and peak periods occur. Weeklong turning movement counts at the intersection were conducted in 15-minute intervals from 5:00 am to 8:00 pm on Friday, July 9, 2021; Saturday July 10, 2021; Sunday, July 11, 2021; Monday, July 12, 2021; Tuesday, July 27, 2021; Wednesday, July 28, 2021; and Thursday, July 29, 2021. These traffic volume counts are attached. Based on the weekly counts collected in July 2021, it was determined that Thursday is the peak weekday for traffic movements and Saturday is the peak for weekend traffic conditions. Therefore, weekday counts at the intersection of 30th Street and Garden of the Gods, 30th Street and Flying W Ranch Road, and Alpine Meadows Lane and Flying W Ranch Road were collected on Thursday, August 5, 2021 and Saturday, August 7, 2021. Counts were conducted in 15-minute intervals during the weekday morning and afternoon peak hours of adjacent street traffic from 10:00 AM to 12:00 PM and 4:00 PM to 6:00 PM and during the Saturday midday peak from 12:30 PM to 2:30 PM. Of note, the 2021 existing counts include traffic volumes generated by the Flying W Ranch and Red Leg Brewery as these two developments are now fully operational. The existing counts are attached as **Figure 2** illustrates the weekday peak hour counts while **Figure 3** illustrates the Saturday peak hour count.

SHORT-TERM AND LONG-TERM HORIZON EVALUATIONS

The short-term 2022 and long-term 2040 traffic volumes developed based on the new August 2021 counts include the project traffic volumes for the 200 multifamily residential units and 200,000 square feet of general office building. In addition, the existing office park did not show many vehicles entering and exiting the site. Therefore, as shown in the 2424 Garden of the Gods Traffic Impact Study, 60 percent of the office park was assigned to the study intersections for the short-term 2022 horizon and 80 percent of the office park was assigned for the long-term 2040 horizon. **Figure 4** illustrates the 2022 weekday total traffic volumes and **Figure 5** illustrates the 2040 weekday total traffic volumes. As shown in both horizons, the controlling afternoon peak hour volumes are consistent with the volumes evaluated in the 2424 Garden of the Gods Traffic Impact Study as previously shown in **Figure 1**. Using the weekday morning peak hour volumes, operations were evaluated. It was found that the study area intersections would operate acceptably during the weekday morning peak hour as shown in **Table 1**. Of note, the 30th Street and Flying W Ranch Road intersection was evaluated with and without two-stage left turn. Since the intersection is a T-intersection with a two-way left turn lane present on the northeast leg of the intersection, southeastbound left turning traffic from Flying W Ranch Road to northeastbound 30th Street can use the existing two-way left turn lane after finding a gap in southbound traffic on 30th Street while then waiting in the center of the roadway for a gap in northbound traffic along 30th Street.

Table 1: Morning Weekday Study Intersection LOS Table

Intersection	Condition	Movement	Control	2022 Total	2040 Total
				LOS (Delay)	LOS (Delay)
30 th St & Garden of the Gods Rd		Overall		27.9 C	30.5 C
30 th St & Flying W Ranch Rd	With Two-Stage Left Turn	Northbound Left		8.9 A	9.9 A
		Eastbound Left		14.3 B	18.1 C
		Eastbound Right		11.1 B	12.9 B
	Without Two-Stage Left Turn	Northbound Left		8.9 A	9.9 A
		Eastbound Left		18.2 C	29.3 D
		Eastbound Right		11.1 B	12.9 B
Flying W Ranch & Alpine Meadows Ln		Northbound Left		8.1 A	8.4 A
		Eastbound Left		14.5 B	17.5 C
		Eastbound Right		9.6 A	10.0 B

Table 2 shows a comparison of the LOS data during the weekday afternoon peak hour. This table shows the comparison of the LOS from the SM Rocha study compared to the Kimley-Horn analysis based on the same time period of evaluation. Also, it should be noted that the afternoon peak hour is the controlling peak hour for determining roadway capacity and needs.

The SM Rocha study shows that the 30th Street and Garden of the Gods Road intersection may operate at LOS E during the weekday afternoon peak hour in 2040; however, our current analysis shows this intersection still operating acceptably at LOS D during the weekday afternoon peak hour in 2040. The difference in the LOS at this signalized intersection is based on the previous overly conservative traffic estimates, whereas we believe that the estimates of traffic will be closer to what is shown in these Kimley-Horn projections. Therefore, this intersection is anticipated to operate acceptably throughout the long-term horizon with the existing configuration.

It should also be noted that the SM Rocha study shows the stop-controlled eastbound left turn movement at the intersection of 30th Street and Flying W Ranch Road operating at LOS F in 2022 during the afternoon peak hour and both evaluations show this movement operating at LOS F for the 2040 horizon. However, as previously noted, it is believed that this eastbound left turn traffic will be able to turn left in two stages while finding separate gaps in traffic along 30th Street. **Table 3** shows that acceptably LOS C during the morning peak hour with two-stage left turns. The delay for this movement in the afternoon peak hour is much lower when it is analyzed as a two-stage left turn, although it still operates at LOS F in 2040 during the weekday afternoon peak hour at a projected 55 seconds of delay per vehicle. Therefore, traffic movements at this intersection should be monitored in the long-term horizon to determine if alternate improvements are ever found to be needed.

Table 2 shows the eastbound left turn at the intersection of Flying W Ranch and Alpine Meadows Lane operating at LOS F in 2040 during the weekday afternoon peak hour for the SM Rocha study, but the Kimley-Horn analysis shows this movement operating at LOS C. Again, we believe that the traffic volumes based on the updated counts demonstrate that this movement will operate acceptably. Of note, an existing two-way left turn lane exists on the north leg of Flying W Ranch Road at this intersection that eastbound left turning traffic could use to perform a two-stage left turn. This was not evaluated in this study to provide a direct comparison to the previous SM Rocha study and volumes.

Table 2: Afternoon Weekday Study Intersection LOS Table Comparison

Intersection	Movement	Control	SM Rocha		Kimley-Horn	
			2022 Total	2040 Total	2022 Total	2040 Total
			LOS (Delay)	LOS (Delay)	LOS (Delay)	LOS (Delay)
30 th St & Garden of the Gods Rd	Overall		34.2 C	72.5 E	31.4 C	40.0 D
30 th St & Flying W Ranch Rd (Without Two-Stage Left Turn)	Northbound Left		13.7 B	34.2 D	8.8 A	10.3 B
	Eastbound Left		>300 F	>300 F	42.9 E	>300 F
	Eastbound Right		13.2 B	22.1 C	10.2 B	11.4 B
Flying W Ranch Rd & Alpine Meadows Ln (Without Two-Stage Left Turn)	Northbound Left		8.2 A	8.7 A	7.7 A	7.9 A
	Eastbound Left		26.0 D	51.5 F	13.6 B	18.0 C
	Eastbound Right		11.3 B	13.5 B	9.6 A	10.4 B

Table 3: Afternoon Weekday LOS Table for 30th Street & Flying W Ranch with Two-Stage Left Turns

Intersection	Movement	Control	2022 Total	2040 Total
			LOS (Delay)	LOS (Delay)
30th St & Flying W Ranch Rd (With Two-Stage Left Turn Lane)	Northbound Left		8.8 A	10.3 B
	Eastbound Left		21.2 C	55.0 F
	Eastbound Right		10.2 B	11.4 B

The maximum intensity for the proposed site includes residential and an office building to produce the highest number of weekday trips. However, while studying the peak hour during Saturday, the maximum intensity for the proposed site is believed to be the scenario where 420 residential units would occur with no office space (with minimal traffic generated by office areas on a Saturday). The trip generation during the Saturday midday peak is anticipated to be 183 trips (trip generation worksheet is attached for reference). Therefore, at the request of the City, a Saturday peak hour analysis was conducted for the study area since the original traffic study only provided evaluation of weekday conditions. **Figure 6** illustrates the 2022 total Saturday peak hour volumes and **Figure 7** illustrates the 2040 total Saturday peak hour volumes. These future 2022 and 2040 total traffic volumes with the full residential development scenario were estimated for the Saturday peak hour trips generated by the 420 units and a two percent annual growth rate. A two percent annual growth rate is believed to be conservative because this growth rate equates to approximately 50 percent traffic growth by 2040. It isn't anticipated that traffic volumes will actually grow at this level or rate as the surrounding area is primarily built out. Comparisons to the regional transportation models demonstrate that traffic volumes will remain constant or only slightly increase by approximately 10 percent in the next twenty years.

Table 4 summarizes the level of service at the three study intersections. As shown in the table, the intersections are anticipated to operate with LOS C or better through the long-term 2040 horizon during the Saturday midday peak hour. The intersection analysis worksheets are attached for reference.

Table 4: Saturday Peak Hour Study Intersection LOS Table

Intersection	Condition	Movement	Control	2022 Total	2040 Total
				LOS (Delay)	LOS (Delay)
30th St & Garden of the Gods Rd		Overall		28.9 C	32.0 C
30th St & Flying W Ranch Rd	With Two-Stage Left Turn	Northbound Left		8.0 A	8.4 A
		Eastbound Left		11.8 B	13.8 B
		Eastbound Right		9.5 A	10.2 B
	Without Two-Stage Left Turn	Northbound Left		8.0 A	8.4 A
		Eastbound Left		13.1 B	17.3 C
		Eastbound Right		9.5 A	10.2 B
Flying W Ranch & Alpine Meadows Ln		Northbound Left		7.6 A	7.7 A
		Eastbound Left		10.5 B	11.5 B
		Eastbound Right		9.1 A	9.4 B

CONCLUSION AND RECOMMENDATIONS

Kimley-Horn and Associates has reviewed the 2424 Garden of the Gods Traffic Impact Study prepared by SM Rocha, LLC in March 2021 and concurs with the traffic study report findings and conclusions. The weekday afternoon peak hour traffic volumes evaluated within the development TIS produced the highest traffic volumes for evaluation purposes and provides the most conservative analysis. Although the Saturday peak hour traffic volumes evaluated within this memorandum have some higher traffic volume conditions, the overall project impact is less during this timeframe. It is believed that two-stage left turns occurring at the 30th Street/Flying W Ranch Road and project access intersections along Flying W Ranch Road will cause the unsignalized stop-control left turn movements to operate better than predicted as reported in the SM Rocha traffic study. Therefore, it is believed that the existing surrounding street network will adequately accommodate project traffic volumes generated by the 2424 Garden of the Gods project.

If you have any questions or require anything further, please feel free to call.

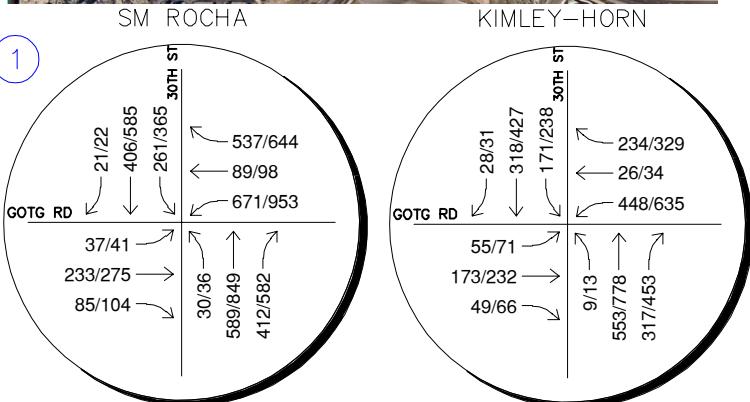

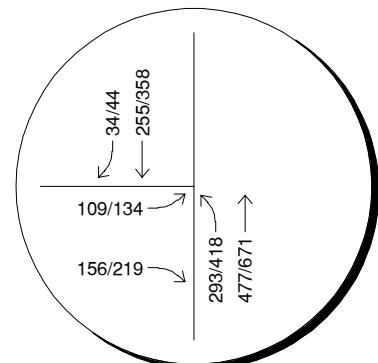

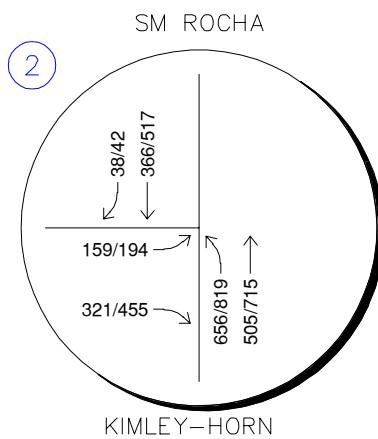

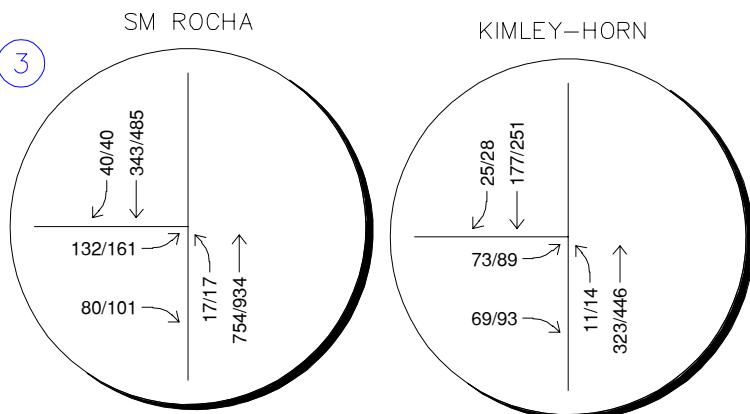

Sincerely,

KIMLEY-HORN AND ASSOCIATES, INC.

Trip Generation Worksheet

Kimley»Horn

Project 2424 Garden of The Gods
 Subject Trip Generation for Multifamily Housing (Mid-Rise)
 Designed by MAG Date August 12, 2021 Job No. 067607040
 Checked by _____ Date _____ Sheet No. 1 of 1

TRIP GENERATION MANUAL TECHNIQUES

ITE Trip Generation Manual 10th Edition, Fitted Curve Equations

Land Use Code - Multifamily Housing (Mid-Rise) (221)

Independent Variable - Dwelling Units (X)

$$X = 420$$

T = Average Vehicle Trip Ends

Peak Hour of Adjacent Street Traffic, One Hour Between 7 and 9 a.m. (Series 200 Page 74)

$\ln(T) = 0.98 \ln(X) - 0.98$ $\ln(T) = 0.98 * \ln(420.0) - 0.98$	Directional Distribution: 26% ent. 74% exit. T = 140 Average Vehicle Trip Ends 36 entering 104 exiting 36 + 104 = 140
--	--

Peak Hour of Adjacent Street Traffic, One Hour Between 4 and 6 p.m. (Series 200 Page 75)

$\ln(T) = 0.96 \ln(X) - 0.63$ $\ln(T) = 0.96 * \ln(420.0) - 0.63$	Directional Distribution: 61% ent. 39% exit. T = 176 Average Vehicle Trip Ends 107 entering 69 exiting 107 + 69 = 176
--	--

Weekday (Series 200 Page 73)

$(T) = 5.45 * (X) - 1.75$ $(T) = 5.45 * 420 - 1.75$	Directional Distribution: 50% ent. 50% exit. T = 2288 Average Vehicle Trip Ends 1144 entering 1144 exiting 1144 + 1144 = 2288
--	--

Peak Hour of Generator, Saturday (Series 200 Page 79)

$(T) = 0.42 * (X) + 6.73$ $(T) = 0.42 * 420 + 6.73$	Directional Distribution: 49% ent. 51% exit. T = 183 Average Vehicle Trip Ends 90 entering 93 exiting 90 + 93 = 183
--	--
