1.0 EXECUTIVE SUMMARY

The Ridge at Spring Creek is proposed to be located on the northeast corner of Circle Drive Ramp and Union Boulevard/Hancock Expressway intersection in Colorado Spring, Colorado. The project is proposed to include 194 attached single-family homes. It is expected that the Ridge at Spring Creek will be completed in the next couple of years; therefore, analysis was conducted for the 2026 short-term buildout horizon as well as the 2045 long-term twenty-year planning horizon.

The purpose of this traffic study is to identify project traffic generation characteristics to determine potential project traffic related impacts on the local street system and to develop the necessary mitigation measures required for the identified traffic impacts. The following intersections were incorporated into this traffic study in accordance with the City of Colorado Spring standards and requirements:

- Circle Drive Ramp and Union Boulevard/Hancock Expressway
- Circle Drive Ramp Full Movement Access
- Circle Drive Right-In/Right-Out (RIRO) Access

Regional access to the Ridge at Spring Creek will be provided by Interstate 25 (I-25) and US-24. Primary access will be provided by Union Boulevard/Hancock Expressway and Circle Drive. Direct access will be provided along Circle Drive Ramp, aligning with an existing driveway that serves a car wash and a storage facility along the south side of the roadway. In addition, a proposed right-in/right-out access will be located along Circle Drive, at the northeast portion of the property.

The Ridge at Spring Creek is expected to generate approximately 1,428 weekday daily trips, with 95 of these trips occurring during the morning peak hour and 112 of these trips occurring during the afternoon peak hour.

Based on the analysis presented in this report, Kimley-Horn believes the Ridge at Spring Creek will be successfully incorporated into the existing and future roadway network. Analysis of the existing street network, the proposed project development, and expected traffic volumes resulted in the following conclusions and recommendations:

- With buildout of the project, a north leg will be constructed along Circle Drive Ramp aligning with the existing storage facility and car wash access. This north leg will be constructed to provide full movement access to the site. The southbound approach out of the development is recommended to operate with stop-control with an R1-1 “STOP” sign installed.
- For safety purposes, turn lanes are recommended along Circle Drive Ramp for traffic turning into the full movement project access as well as the existing driveway on the south side of the roadway. Turn lanes with a length of 120 feet plus 140-foot taper are recommended to be designated for the westbound left turn and westbound right turn lanes at the Circle Drive Ramp Access intersection. Based on the posted 25 mile per hour speed limit along Circle Drive Ramp west of the access, a 115-foot plus 120-foot taper eastbound left turn lane is recommended at the access to be back-to-back with the inside westbound left turn lane of the dual left turn lanes for the Circle Drive and Union Boulevard/Hancock Expressway intersection to the west.
- An additional right-in/right-out access is proposed along the west side of Circle Drive at the northeast portion of the site. It is recommended that a R1-1 “STOP” sign be installed on the eastbound approach, exiting the Ridge at Spring Creek. This access will be restrict to right turn egress movements only; therefore, a R3-2 No Left Turn Lane is recommended to be provided below the “STOP” sign as well as a possible R6-1 (R) “ONE WAY” sign installed within the existing raised median of Circle Drive, directly in an exiting driver’s view. The southbound Circle Drive approach to the right-in/right-out access should be restriped so that the outside lane is converted to standard 10-foot stripe 30-foot gap through lane striping instead of the existing short skip dashed striping denoting the upcoming right turn lane for the off ramp.

- Any on-site or offsite improvements should be incorporated into the Civil Drawings and conform to standards of the City of Colorado Springs and the Manual on Uniform Traffic Control Devices (MUTCD) – 2009 Edition.

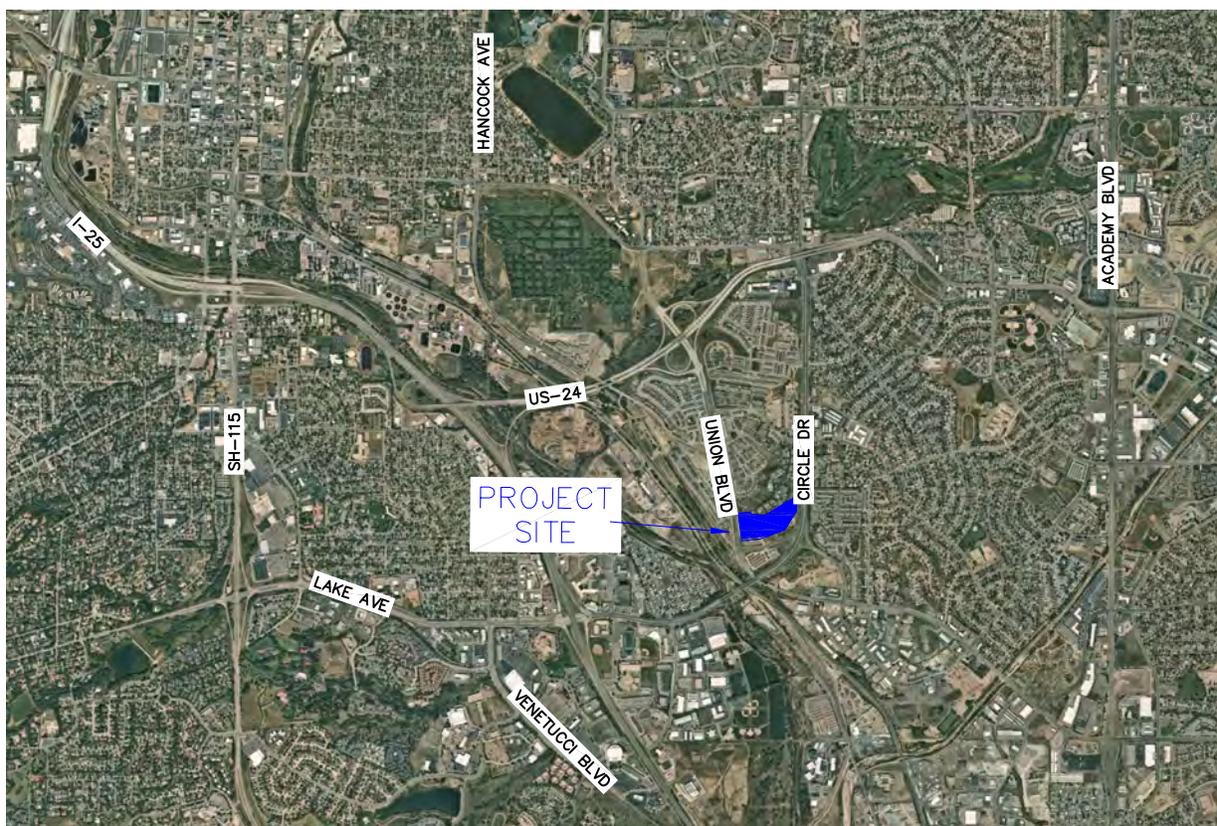

2.0 INTRODUCTION

Kimley-Horn and Associates, Inc. has prepared this report to document the results of a Traffic Impact Study for the Ridge at Spring Creek proposed to be located on the northeast corner of Circle Drive Ramp and Union Boulevard/Hancock Expressway intersection in Colorado Spring, Colorado. A vicinity map illustrating the Ridge at Spring Creek development location is shown in **Figure 1**. The Ridge at Spring Creek is proposed to include 194 attached single-family homes. A conceptual site plan is attached in **Appendix A**. It is expected that the Ridge at Spring Creek will be completed in the next couple of years; therefore, analysis was conducted for the 2026 short-term buildout horizon as well as the 2045 long-term twenty-year planning horizon.

The purpose of this traffic study is to identify project traffic generation characteristics to determine potential project traffic related impacts on the local street system and to develop the necessary mitigation measures required for the identified traffic impacts. The following intersections were incorporated into this traffic study in accordance with the City of Colorado Spring standards and requirements:

- Circle Drive Ramp and Union Boulevard/Hancock Expressway
- Circle Drive Ramp Full Movement Access
- Circle Drive Right-In/Right-Out (RIRO) Access

Regional access to the Ridge at Spring Creek will be provided by Interstate 25 (I-25) and US-24. Primary access will be provided by Union Boulevard/Hancock Expressway and Circle Drive. Direct access will be provided along Circle Drive Ramp, aligning with an existing driveway that serves a car wash and a storage facility along the south side of the roadway. In addition, a proposed Right-In/Right-Out access will be located along Circle Drive, at the northeast portion of the property.

FIGURE 1

3.0 EXISTING AND FUTURE CONDITIONS

3.1 Existing Study Area

The existing site is vacant land. Surrounding the site are newly constructed homes with a mix of multifamily and single-family. Extending to the west are a mix of industrial, retail, and Harrison High School.

3.2 Existing Roadway Network

Union Boulevard extends north of Circle Drive while Hancock Expressway extends south of Circle Drive in the north-south direction. Union Boulevard/Hancock Expressway provides two through lanes in each direction and bicycle lanes on either side of the roadway. The posted speed limit is 40 miles per hour. The City of Colorado Springs classifies Union Boulevard/Hancock Expressway as a Principal Arterial roadway.

Circle Drive Ramp is an on and off ramp for south westbound traffic along Circle Drive accessing Union Boulevard/Hancock Expressway. The Circle Drive Ramp provides one through lane in each direction off and onto Circle Drive. The City of Colorado Springs classifies Union Boulevard/Hancock Expressway as a Principal Arterial roadway.

The signalized intersection Circle Drive Ramp and Union Boulevard/Hancock Expressway operates with permissive-only left turn phasing southbound approach of Union Boulevard. The southbound approach provides a left turn lane and two through lanes while the northbound approach provides two through lanes and a right turn lane. The westbound approach provides dual left turn lanes and a right turn lane. An aerial photo of the existing intersection configuration is below.

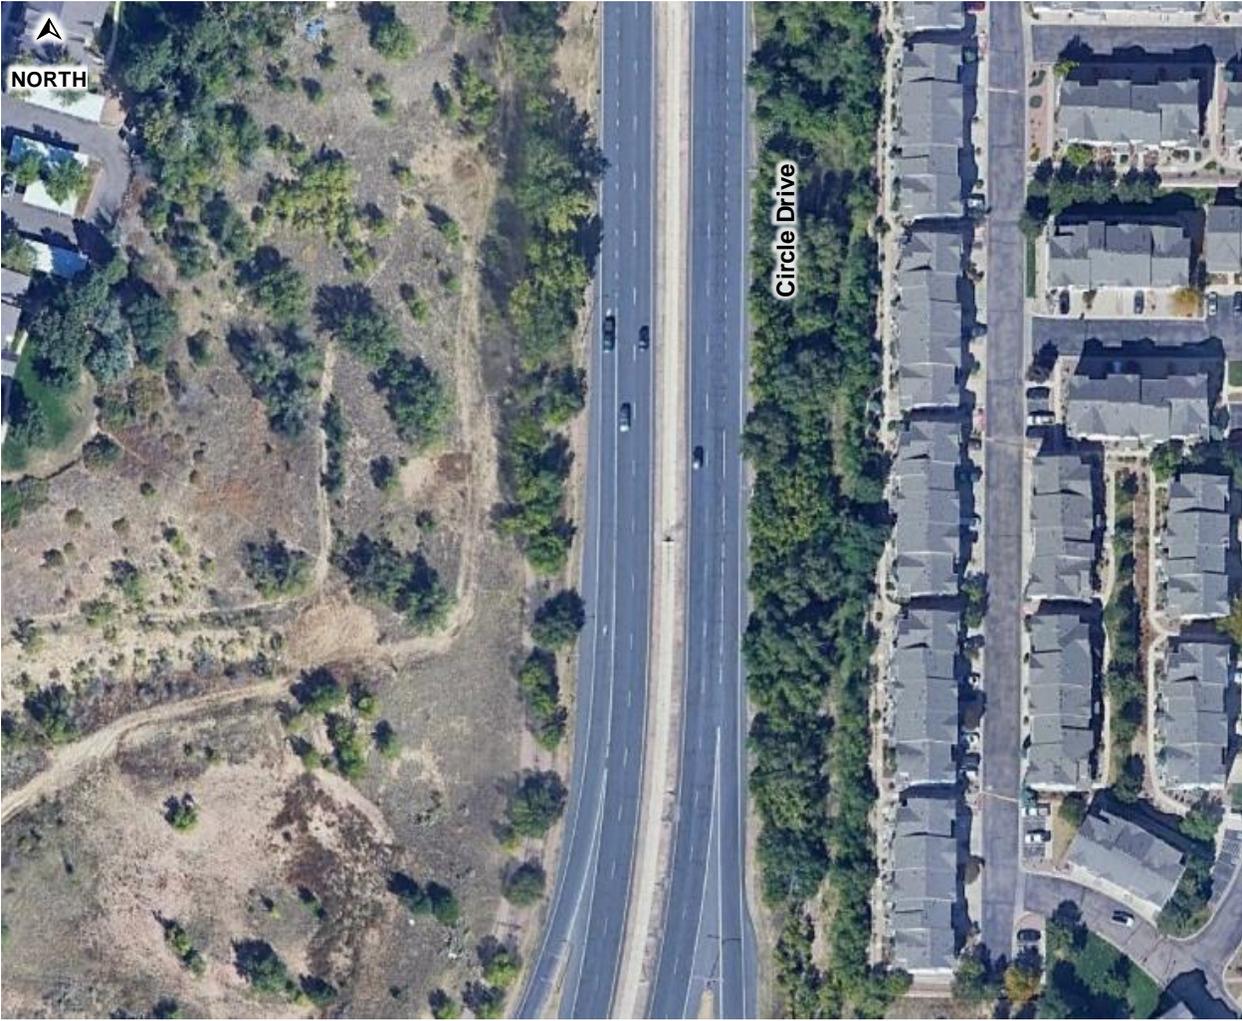

Circle Drive Ramp & Union Boulevard/Hancock Expressway

The unsignalized intersection of Circle Drive Ramp and Driveway operates with stop control on the northbound approach of the storage facility and car wash driveway. The north leg is proposed to be constructed as an access to the project site. All three approaches provide a single lane shared for all movements. An aerial photo of the existing intersection configuration is below.

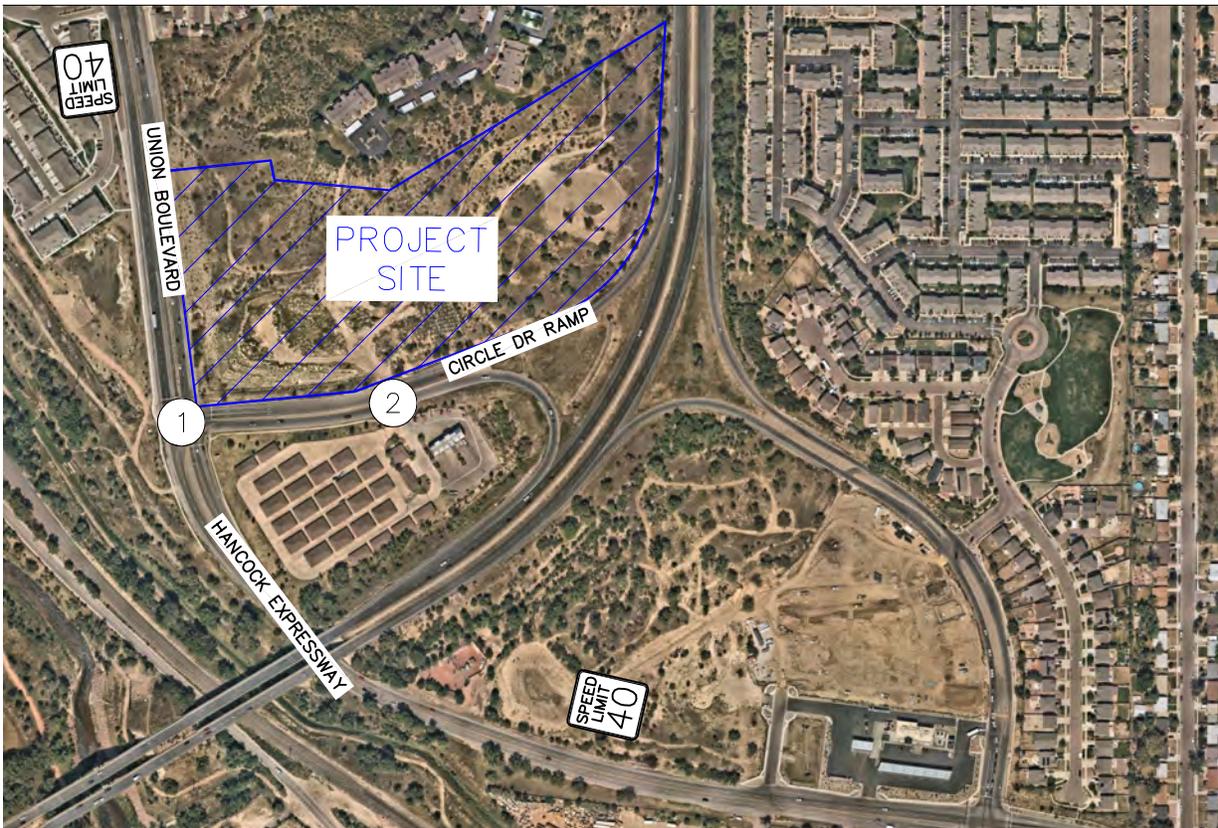

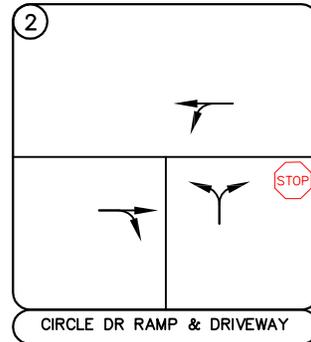

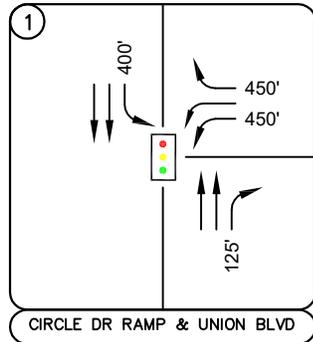

Circle Drive Ramp Full Movement Access

The proposed right-in/right-out access along Circle Drive is located approximately where the outside third southbound lane transitions from the short skip dash striping to solid striping for the upcoming right turn lane and offramp. At this location, Circle Drive provides three through lanes in each direction, northbound and southbound. An aerial photo of the existing roadway at the proposed right-in/right-out access intersection is below.

Circle Drive Right-In/Right-Out Access Location

The intersection lane configuration and control for the study area intersections are shown in **Figure 2**.

FIGURE 2

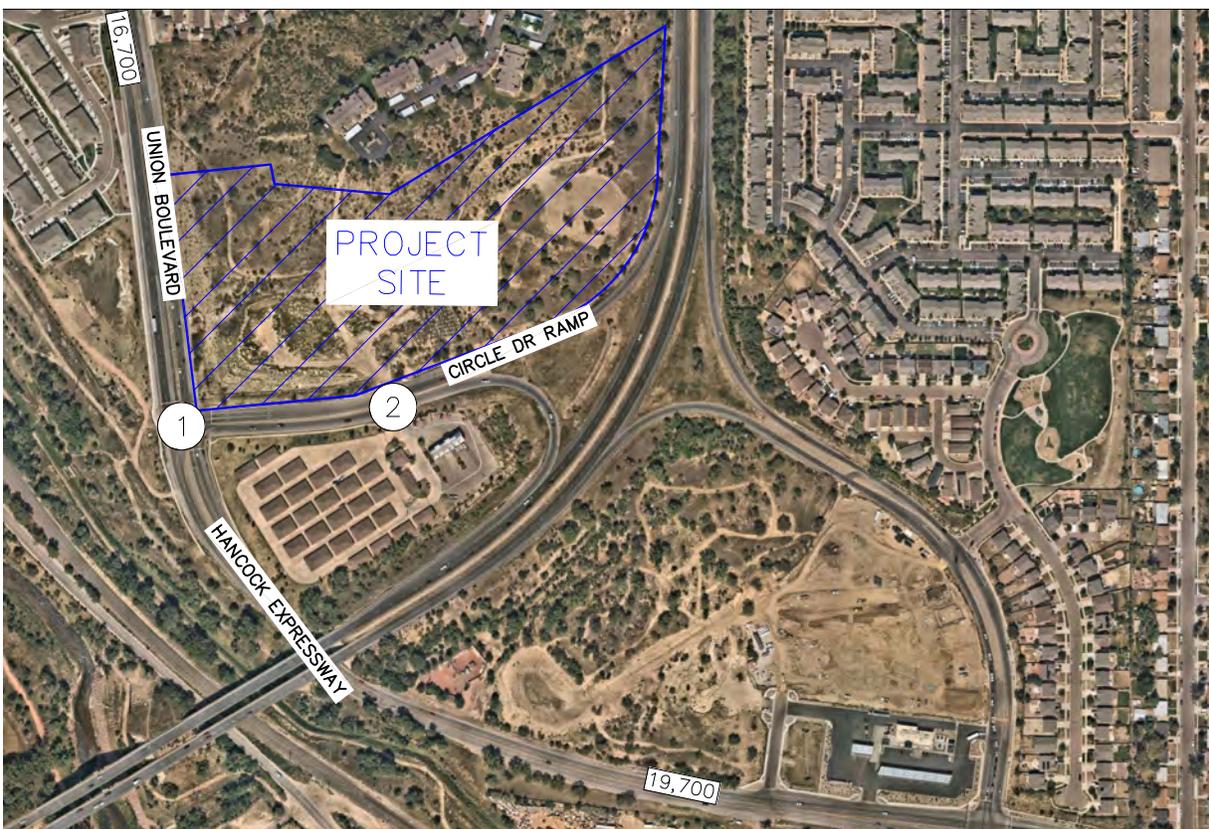

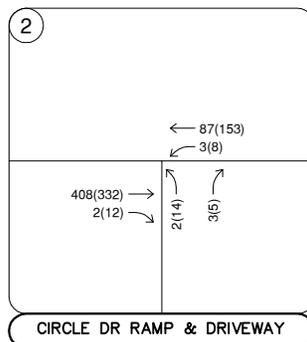

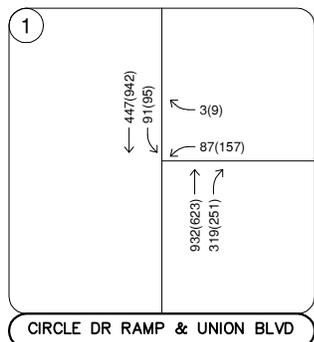

3.3 Existing Traffic Volumes

Existing turning movement counts were conducted at the study intersections on Tuesday, February 8, 2022, during the morning and afternoon peak hours. Existing counts were also collected at the proposed Right-In/Right-Out access location along Circle Drive on Tuesday August 27, 2024. The counts were conducted during the morning and afternoon peak hours of adjacent street traffic in 15-minute intervals from 7:00 AM to 9:00 AM and 4:00 PM to 6:00 PM on these count dates. Count sheets are provided in **Appendix B**.

To adjust the counts collected in 2022 to current conditions, a one (1) percent annual growth rate was applied to the traffic volumes to determine 2024 adjusted traffic volumes. These volumes are illustrated in **Figure 3**.

3.4 Unspecified Development Traffic Growth

According to traffic projections from the Pikes Peak Area Council of Governments (PPACG) traffic model, the area surrounding the site is expected to have an average 25-year growth factor of 1.19. This growth factor equates to an annual growth rate of 0.7 percent. Future traffic volume projections and growth rate calculations are provided in **Appendix C**. To be conservative, a one (1) percent annual growth rate was used to calculate future traffic volumes at the study area intersections. This annual growth rate was used to estimate short-term 2026 and long-term 2045 traffic volume projections at the key intersections. Of note, the driveway volumes into and out of the car wash and self-storage facility were not grown as this is an existing development with anticipated steady traffic volumes into the future. The calculated background traffic volumes for 2026 and 2045 are shown in **Figure 4** and **Figure 5**, respectively.

FIGURE 5

4.0 PROJECT TRAFFIC CHARACTERISTICS

4.1 Trip Generation

Site-generated traffic estimates are determined through a process known as trip generation. Rates and equations are applied to the proposed land use to estimate traffic generated by the development during a specific time interval. The acknowledged source for trip generation rates is the *Trip Generation Manual*¹ published by the Institute of Transportation Engineers (ITE). ITE has established trip rates in nationwide studies of similar land uses. For this study, Kimley-Horn used the ITE Trip Generation Report fitted curve equations that applies to Single Family Attached Housing (ITE Land Use Code 215), for traffic associated with the development.

The Ridge at Spring Creek is expected to generate approximately 1,428 weekday daily trips, with 95 of these trips occurring during the morning peak hour and 112 of these trips occurring during the afternoon peak hour. Calculations were based on the procedure and information provided in the ITE *Trip Generation Manual, 11th Edition – Volume 1: User's Guide and Handbook, 2021*.

Table 1 summarizes the estimated trip generation for the Ridge at Spring Creek. The trip generation worksheets are included in **Appendix D**.

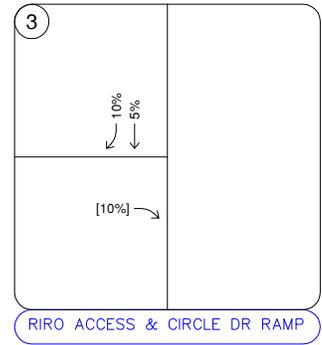

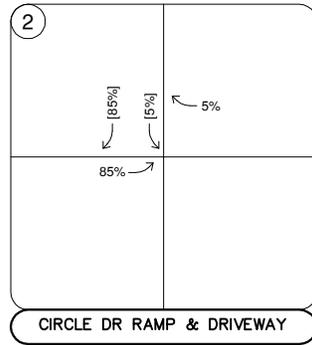

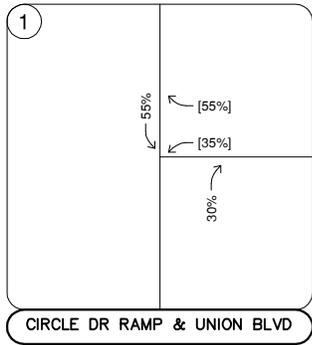

Table 1 – The Ridge at Spring Creek Traffic Generation

Land Use and Size	Weekday Vehicle Trips						
	Daily	AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total
Single Family Attached Housing (ITE 215) – 194 Dwelling Units	1,428	29	66	95	66	46	112

4.2 Trip Distribution

Distribution of site traffic on the street system was based on the area street system characteristics, existing traffic patterns, existing and anticipated surrounding demographic information, and the proposed access system for the project. The directional distribution of traffic is a means to quantify the percentage of site-generated traffic that approaches the site from a given direction and departs the site back to the original source. The project trip distribution for the proposed development is illustrated in **Figure 6**.

4.3 Traffic Assignment

The Ridge at Spring Creek traffic assignment was obtained by applying the project trip distribution to the estimated traffic generation of the development shown in **Table 1**. Traffic assignment is shown in **Figure 7**.

4.4 Total (Background Plus Project) Traffic

Site traffic volumes were added to the background volumes to represent estimated traffic conditions for the short-term 2026 buildout horizon and long-term 2045 twenty-year planning horizon. These total traffic volumes for the study area are illustrated for the 2026 and 2045 horizon years in **Figures 8** and **9**, respectively.

FIGURE 9

5.0 TRAFFIC OPERATIONS ANALYSIS

Kimley-Horn's analysis of traffic operations in the site vicinity was conducted to determine potential capacity deficiencies in the 2026 and 2045 development horizons at the identified key intersections. The acknowledged source for determining overall capacity is the current edition of the *Highway Capacity Manual (HCM)*².

5.1 Analysis Methodology

Capacity analysis results are listed in terms of Level of Service (LOS). LOS is a qualitative term describing operating conditions a driver will experience while traveling on a particular street or highway during a specific time interval. It ranges from A (very little delay) to F (long delays and congestion). For intersections and roadways in this study area, standard traffic engineering practice recommends overall intersection LOS D and movement/approach LOS E as the minimum desirable thresholds for acceptable operations. **Table 2** shows the definition of level of service for signalized and unsignalized intersections.

Table 2 – Level of Service Definitions

Level of Service	Signalized Intersection Average Total Delay (sec/veh)	Unsignalized Intersection Average Total Delay (sec/veh)
A	≤ 10	≤ 10
B	> 10 and ≤ 20	> 10 and ≤ 15
C	> 20 and ≤ 35	> 15 and ≤ 25
D	> 35 and ≤ 55	> 25 and ≤ 35
E	> 55 and ≤ 80	> 35 and ≤ 50
F	> 80	> 50

Definitions provided from the Highway Capacity Manual, Seventh Edition, Transportation Research Board, 2022.

Study area intersections were analyzed based on average total delay analysis for signalized and unsignalized intersections. Under the unsignalized analysis, the LOS for a two-way stop-controlled intersection is determined by the computed or measured control delay and is defined for each minor movement. LOS for a two-way stop-controlled intersection is not defined for the intersection as a whole. LOS for signalized, roundabout, and all-way stop controlled intersections are defined for each approach and for the overall intersection.

² Transportation Research Board, *Highway Capacity Manual*, Seventh Edition, Washington DC, 2022.

5.2 Key Intersection Operational Analysis

Calculations for the operational level of service at the key intersections for the study area are provided in **Appendix E**. The existing year analysis is based on the lane geometry and intersection control shown in **Figure 2**. Existing peak hour factors were utilized in the analysis. The increase in yellow and all red time sacrifices intersection capacity for improved safety. Synchro traffic analysis software was used to analyze the signalized, and unsignalized key intersections for HCM level of service.

Circle Drive Ramp and Union Boulevard/Hancock Expressway

The signalized intersection Circle Drive Ramp and Union Boulevard/Hancock Expressway operates with permissive-only left turn phasing on the southbound approach of Union Boulevard. The intersection operates acceptably at LOS A during both peak hours under existing conditions. With project traffic, all movements are anticipated to continue operating LOS A throughout the 2045 horizon. Therefore, no recommendations to the existing control or lane configurations are proposed at this intersection. **Table 3** provides the results of the LOS analysis conducted at this intersection.

Table 3 – Circle Dr Ramp and Union Blvd/Hancock Expwy LOS Results

Scenario	AM Peak Hour		PM Peak Hour	
	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS
2024 Existing	3.8	A	5.4	A
2026 Background	3.9	A	5.4	A
2026 Background Plus Project	5.2	A	6.1	A
2045 Background	4.4	A	5.9	A
2045 Background Plus Project	5.7	A	6.6	A

Circle Drive Ramp Full Movement Access

The unsignalized access intersection along Circle Drive Ramp operates with stop control on the northbound approach of the driveway. The intersection movements operate acceptably at LOS B or better during both peak hours under existing conditions. With buildout of the project, a north leg will be constructed along Circle Drive Ramp aligning with the existing storage facility and car wash access. This north leg will be constructed to provide access to the site. The southbound approach out of the development is recommended to operate with stop-control with an R1-1 “STOP” sign installed. All movements are anticipated to continue operating at an acceptable level of service throughout the 2045 horizon, with or without project traffic. For safety purposes, turn lanes are recommended along Circle Drive Ramp for traffic turning into the project access and existing driveway on the south side of the roadway. Turn lanes are recommended to be designated for the eastbound left turn, westbound left turn, and westbound right turn lanes at the Circle Drive Ramp Access. The eastbound left turn lane at the access will be back-to-back with the inside westbound left turn lane of the dual left turn lanes for the Circle Drive and Union Boulevard/Hancock Expressway intersection to the west. **Table 4** provides the results of the LOS analysis conducted at this intersection.

Table 4 – Circle Drive Ramp Full Movement Access LOS Results

Scenario	AM Peak Hour		PM Peak Hour	
	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS

= Addition of North Leg

Circle Drive Right-In/Right-Out Access

With completion of the Ridge at Spring Creek project, a right-in/right-out access is proposed along the west side of Circle Drive, at the northeast corner of the property. It is recommended that a R1-1 “STOP” sign be installed on the eastbound approach, exiting the Ridge at Spring Creek. This access will be restricted to right turn egress movements only; therefore, a R3-2 No Left Turn Lane is recommended to be provided below the “STOP” sign as well as a possible R6-1 (R) “ONE WAY” sign installed within the existing raised median of Circle Drive, directly in an exiting driver’s view. The southbound Circle Drive approach to the right-in/right-out access should be restriped so that the outside lane is converted to standard 10-foot stripe 30-foot gap through lane striping instead of the existing short skip dashed striping denoting the upcoming right turn lane for the off ramp. **Table 5** provides the results of the level of service for this project access. As shown in the table, the eastbound right turn exiting the Circle Drive Right-In/Right-Out Access is anticipated to operate with acceptable LOS C during the morning peak hour and LOS B during the afternoon peak hour in the buildout year of 2026. The eastbound right turn at the access is projected to continue operating acceptably at LOS C during both peak hours in the 2045 long-term horizon.

Table 5 – Circle Drive Right-In/Right-Out Access LOS Results

Movement	2026 Total				2045 Total			
	AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
	Delay (sec/veh)	LOS						
Eastbound Right Turn	15.6	C	14.3	B	18.1	C	16.2	C

5.3 Vehicle Queuing Analysis

A vehicle queuing analysis was conducted for the study area intersections. The queuing analysis was performed using Synchro presenting the results of the 95th percentile queue lengths. Results are shown in the following **Table 6** with calculations provided within the level of service operational sheets of **Appendix E** for unsignalized intersections and **Appendix F** for signalized intersections.

Table 6 – Turn Lane Queuing Analysis Results

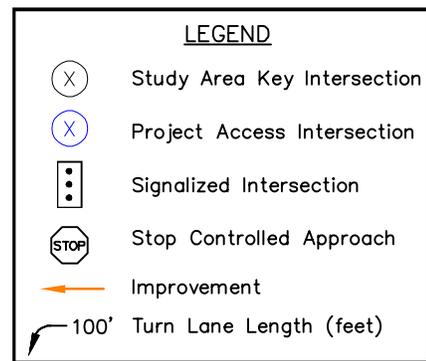

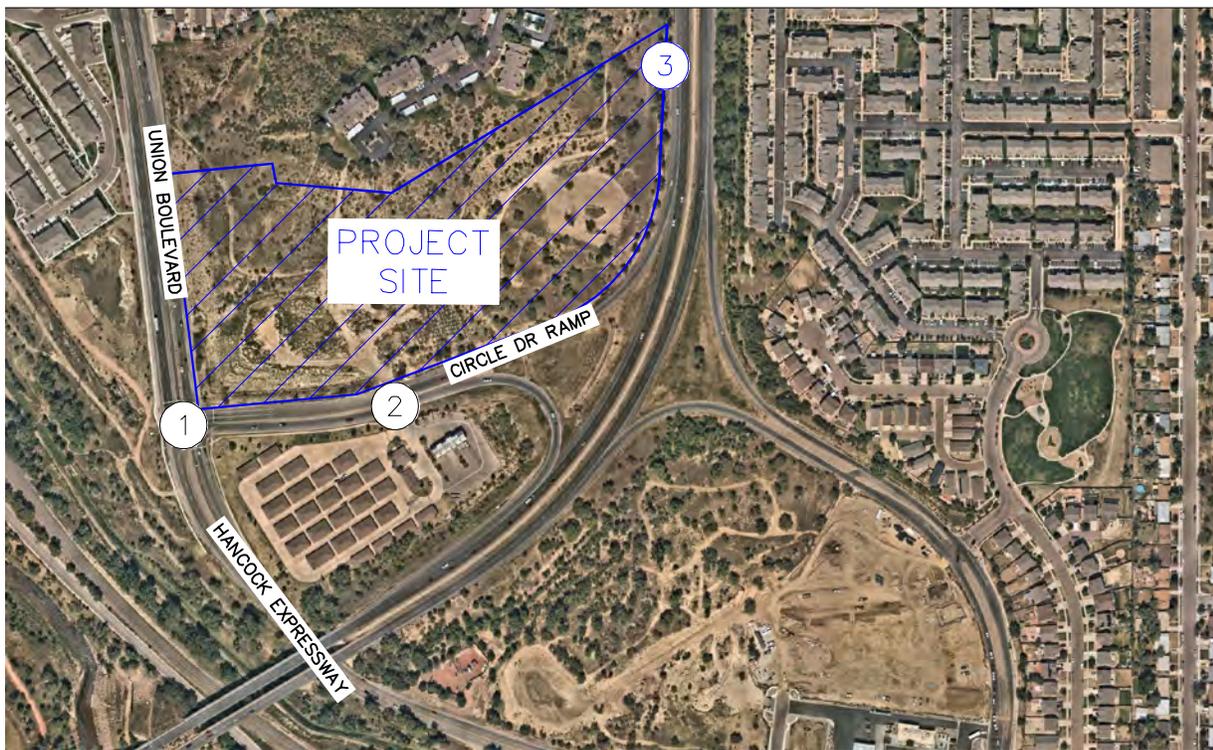

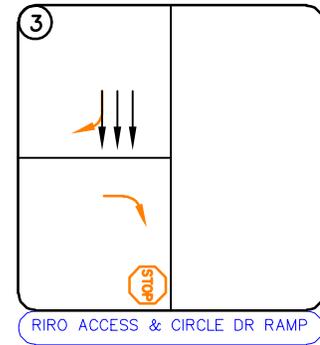

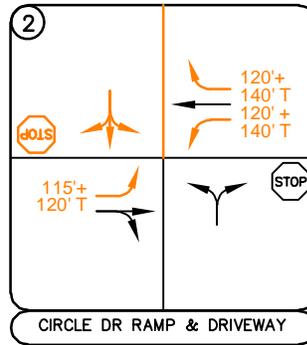

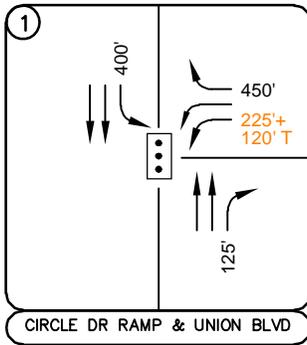

Intersection Turn Lane	Existing Turn Lane Length (feet)	2024 Calculated Queue (feet)	2024 Recommended Length (feet)	2025 Calculated Queue (feet)	2025 Recommended Length (feet)
Circle Dr Ramp & Union Blvd					
Westbound Left	450'/C	81' DL	225'/C	93' DL	225'/C
Westbound Right	450'	27'	450'	30'	450'
Northbound Right	125'	16'	125'	18'	125'
Southbound Left	400'	39'	400'	69'	400'
Circle Drive Ramp Access					
Eastbound Left	DNE	25'	115'+120'T	25'	115'+120'T
Westbound Left	DNE	25'	120'+140'T	25'	120'+140'T

DNE = Does Not Exist; C = Continuous; T=Taper; **Blue** Text = Recommendation

As shown in the vehicle queuing table, all turn lane vehicle queues are expected to be contained within the existing turn lane lengths. However, turn lanes into and out of the project access and existing driveway on the south leg are recommended to be striped for safety purposes along the ramp. The westbound turn lanes at Circle Drive and Union Boulevard/Hancock Expressway intersection will need to be modified to accommodate an eastbound left turn lane into the project site. The Circle Drive On-Ramp was identified as having a posted speed limit of 25 miles per hour, matching the ramp posted speed. A lane length of 115 feet plus a 120-foot taper is required at this speed for the eastbound left turn lane into the access. The 120-foot taper will be shared with the inside westbound left turn lane at the Circle Drive and Union Boulevard/Hancock Expressway intersection to the west. Assuming Circle Drive Off-Ramp has a speed of 35 miles per hour based on the approximate 500-foot curve radius, the westbound left turn and right turn lanes at the Circle Drive Ramp Access intersection should be designated with a length of 120 feet plus a 140-foot taper based on City of Colorado Springs Engineering Criteria Manual (ECM).

5.4 Improvement Summary

Based on the results of the intersection operational and vehicle queuing analysis, the key intersection recommended improvements and control are shown in **Figure 10**. In addition, an improvement exhibit for the restriping of turn lanes at the Circle Drive Ramp Access intersection is shown in **Figure 11**.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the analysis presented in this report, Kimley-Horn believes the Ridge at Spring Creek will be successfully incorporated into the existing and future roadway network. Analysis of the existing street network, the proposed project development, and expected traffic volumes resulted in the following conclusions and recommendations:

- With buildout of the project, a north leg will be constructed along Circle Drive Ramp aligning with the existing storage facility and car wash access. This north leg will be constructed to provide full movement access to the site. The southbound approach out of the development is recommended to operate with stop-control with an R1-1 “STOP” sign installed.
- For safety purposes, turn lanes are recommended along Circle Drive Ramp for traffic turning into the full movement project access as well as the existing driveway on the south side of the roadway. Turn lanes with a length of 120 feet plus 140-foot taper are recommended to be designated for the westbound left turn and westbound right turn lanes at the Circle Drive Ramp Access intersection. Based on the posted 25 mile per hour speed limit along Circle Drive Ramp west of the access, a 115-foot plus 120-foot taper eastbound left turn lane is recommended at the access to be back-to-back with the inside westbound left turn lane of the dual left turn lanes for the Circle Drive and Union Boulevard/Hancock Expressway intersection to the west.
- An additional right-in/right-out access is proposed along the west side of Circle Drive at the northeast portion of the site. It is recommended that a R1-1 “STOP” sign be installed on the eastbound approach, exiting the Ridge at Spring Creek. This access will be restricted to right turn egress movements only; therefore, a R3-2 No Left Turn Lane is recommended to be provided below the “STOP” sign as well as a possible R6-1 (R) “ONE WAY” sign installed within the existing raised median of Circle Drive, directly in an exiting driver’s view. The southbound Circle Drive approach to the right-in/right-out access should be restriped so that the outside lane is converted to standard 10-foot stripe 30-foot gap through lane striping instead of the existing short skip dashed striping denoting the upcoming right turn lane for the off ramp.

- Any on-site or offsite improvements should be incorporated into the Civil Drawings and conform to standards of the City of Colorado Springs and the Manual on Uniform Traffic Control Devices (MUTCD) – 2009 Edition.

APPENDIX C

Future Traffic Projections

PPACG Traffic Projections: The Ridge at Spring Creek

Location	Daily Volumes			
	2015	2040	Growth Factor	Annual Growth
Union Blvd N/O Circle Dr Ramp	9,341	11,191	1.20	0.7%
Hancock Expwy S/O Circle Dr Ramp	9,474	11,191	1.18	0.7%
Total (Average)	18,815	22,382	1.19	0.7%

APPENDIX D

Trip Generation Worksheets

Project The Ridge at Spring Creek
 Subject Trip Generation for Single-Family Attached Housing
 Designed by PAC Date September 30, 2024 Job No. 296062000
 Checked by _____ Date _____ Sheet No. _____ of _____

TRIP GENERATION MANUAL TECHNIQUES

ITE Trip Generation Manual 11th Edition, Fitted Curve Equations

Land Use Code - Single-Family Attached Housing (215)

Independent Variable - Dwelling Units (X)

$$X = 194$$

T = Average Vehicle Trip Ends

Peak Hour of Adjacent Street Traffic, One Hour Between 7 and 9 a.m. (200 Series Page 239)

(T) = 0.52 (X) - 5.70	Directional Distribution:	31% ent.	69% exit.
(T) = 0.52 * (194) - 5.70	T = 95	Average Vehicle Trip Ends	
	29 entering	66	exiting
	29 + 66 = 95		

Peak Hour of Adjacent Street Traffic, One Hour Between 4 and 6 p.m. (200 Series Page 240)

(T) = 0.60 (X) - 3.93	Directional Distribution:	59% ent.	41% exit.
(T) = 0.60 * (194) - 3.93	T = 112	Average Vehicle Trip Ends	
	66 entering	46	exiting
	66 + 46 = 112		

Weekday (200 Series Page 238)

(T) = 7.62 (X) - 50.48	Directional Distribution:	50% entering, 50% exiting	
(T) = 7.62 * (194) - 50.48	T = 1428	Average Vehicle Trip Ends	
	714 entering	714	exiting
	714 + 714 = 1428
