

1715 Wood Ave

The project is located at 1715 Wood Ave on the east side of Wood Ave facing West. The proposed scope of work includes a very small addition to the rear of the home to accommodate an elevator lift system. Due to a family members disability, they require an elevator to gain access to different floors of the home.

The elevator foot print will mostly use the existing egress window well on the back of the home next to the rear entryway. The addition will include one singular elevator shaft as shown on plans. The exterior finishes are scheduled to match existing details to meet HPB standards.

Secondly, the exist two center supporting posts are scheduled to be removed on the

south facing patio. No other change here is proposed.
